

Training workshop of electrical machine winding

Introduction

Training electrical motor technology and their usage in industries became more important as the operation of electrical machine is growing increasingly in heavy industries and home appliances.

To keep step with this aspect of modern industry, EEI intended to design and produce this training workshop.

This workshop consists of 11 training sets. Some of them have been shown in the following images:

Controlling apparatus of motor load

Trainee's workbench

Training set for teaching electrical machines with computer

Training workshop of electrical machine winding

Industrial switches set

Sectioned induction motor

Demonstration model of motor winding

Set of training connection and fault finding motors

Set of training connection and fault finding of motor

Set of training revolving filed

Workbench for Electrical test of motors

Trolley for carrying the motor

Introduction

One of the fields that is very popular in vocational training is car repairing and maintenance. Realizing this need, EEI intended to design and produce this training workshop with 36 sets. Please take a look at some of the sets image in the pictures below.

Car air condition set

Set of injection motor of Peugeot 405 with its power transmission system

Sectioned gear box of Peugeot 405 set
