

Introduction

Biology is the science that studies living organisms. Needless to say that no one can study biology without using laboratory and educational equipment. To meet this need in education field, E.E.I has designed and produced a biology kit which with 74 items can supply equipment for at least 54 experiments. See some of the items.

Dissecting set

Flower model

Various types of microscope

Frog dissecting

○ Biology kit

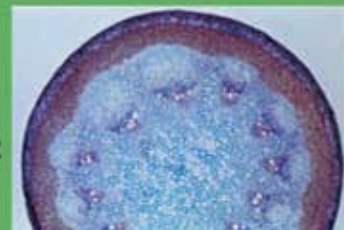

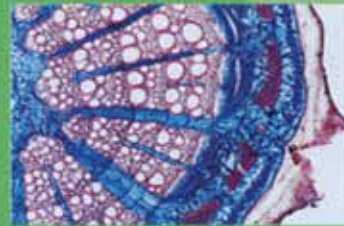

Plant dissection

Dissection of sheep kidney

Dissection of sheep lung

Microscopic slides set

Introduction

Enjoying knowledge of experienced teachers and experts of biology and anatomy, EEI has designed and produced various types of laboratory equipment and anatomy models. More than 70 human, animal, plant and microscopic creatures' models are produced and provided to educational centers.

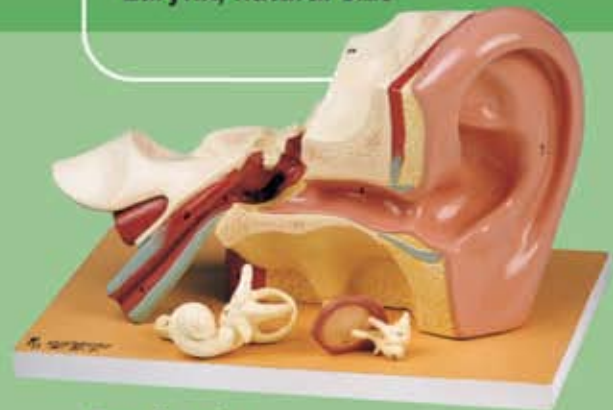

The images of some of them are shown in below:

Larynx, natural size

Skin section

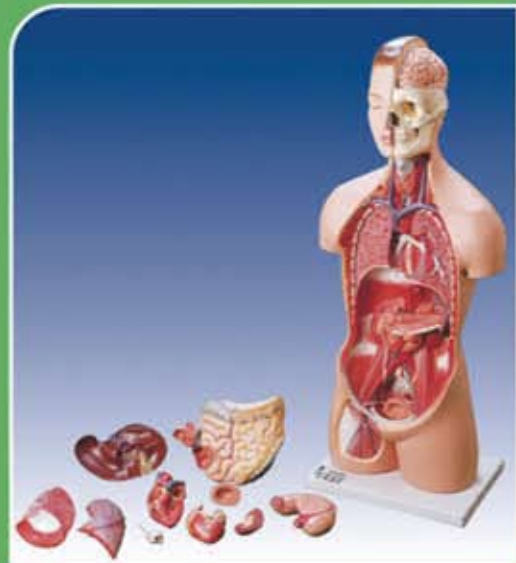

Ear, 4 parts

Torso with muscle, 1/4 natural size

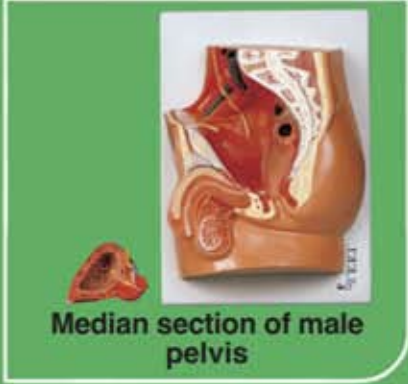

Pregnancy series

Torso, natural size

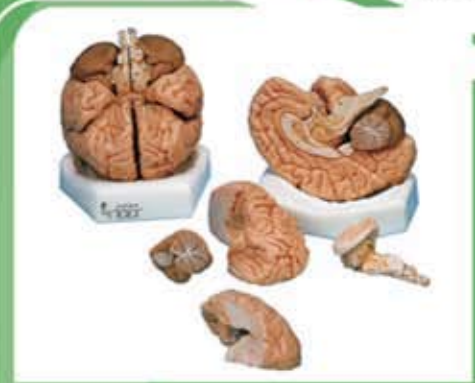

○ Anatomy Models

Median section of male pelvis

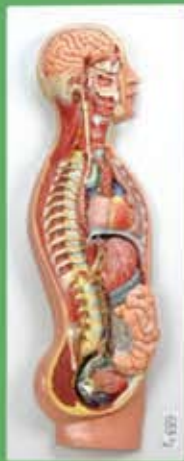

Human skeleton, smaller than natural size

Brain, 8 parts

Eyeball with part of orbit
Water kit

Sympathetic and parasympathetic nervous systems

Teeth brushing instruction model, 3 times enlarged
