

○ Training workshop of heating and sewage plants

Introduction

One of the most important life apprehensions of modern human is development of individual and public health and conservation culture.

Applying central heating system technology, watering system installations (hot and cold) and sewage system can meet people's sanitation needs and ensure their health. Moreover, they can solve the environment problems somehow.

This set is produced based on the educational needs of vocational training centers and higher education centers providing the equipment which is appropriate with actual parts in an actual set (a small 2-floor building).

This workshop has been produced in 2 subsets, heating - sewage plants and heating plants pumps, and presented to vocational schools and higher education centers. You can see the image of some of them in the following pictures.
